

INCLINATOR[®] LX HOME ELEVATORS

The luxury car that never leaves your home.

*Beautifully designed.
Masterfully engineered.*

INCLINATOR® elevators are individually designed, hand-crafted and use the most advanced home elevator technology. We're still family-owned and focused on delivering the highest-quality and most reliable home elevator. We believe that's why there are more INCLINATOR® elevators in homes across America than any other brand.

INCLINATOR® LX FEATURES:

- The most customizable home elevator
- Gearless traction motor
- Super smooth ride
- Virtually noiseless operation
- Machine roomless
- Install in new home or add to existing home

Setting a standard for environmentally-friendly home elevators:

- Machine roomless – less sq. ft. and construction materials
- Slower motor speed – reduces energy consumption
- Gearless motor – longer life span than geared motors
- No hydraulic or gear oils – no risk of soil contamination

Enjoy the ride.

INCLINATOR® elevator
perfectly matches the design
and finish of the home's
custom cabinetry.

INCLINATOR® LX

A proud heritage of innovation and excellence.

In 1923, Harrisburg, PA inventor C.C. Crispen created a way for his ailing friend to travel from floor to floor. His idea was to build a seat that would climb stairs. He called it the Inclinator. Five years later, he built his first elevator as an alternative for homes with winding stairs. He called it the Elevette. Through the years, vertical wheelchair lifts, package stair lifts and dumbwaiters were added. And, the Elevette® continued to be refined. In 2007, the industry's most advanced home elevator was introduced: INCLINATOR® LX.

More custom features than any other elevator

- 4 car styles with custom options
- Custom sizes up to 15 sq. ft.
- Door openings on 1, 2 or 3 sides
- Can accommodate up to 5 landings
- Nearly all wood species available
- Stained or painted in factory or on-site

Elevator Configurations

Typical Car Configurations

Elevator car can have door openings on 1, 2 or 3 sides.

Standard Safety Features

Gate Safety Switch

This requires the gate to remain closed during the car's movement.

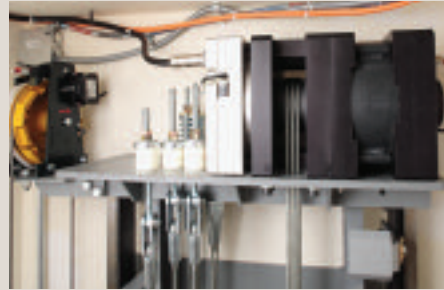

Car Floating Gate Switch

This stops the car when an object extends through the gate and forces it up or down.

Key Lockout

To render the call station inoperable.

Gearless Traction Motor (patented)

- Super smooth ride
- Virtually noiseless operation
- Contains no hydraulic or gear oil (no smell or potential spills)
- 950 lb. capacity (highest allowable capacity)
- Cable traction for raising/lowering
- Emergency battery lowering
- Automatic, instantaneous dual cable safeties
- Automatic overrun switch

Microprocessor-Based Controller

- Upgraded electrical technology
- Self-diagnostic
- Easier to maintain and service

Double-Rail Chassis

- Precision engineering
- Holds motor; eliminates machine room

Consult local codes before ordering.
